As one of the fastest growing suppliers of taps, showers, heated towel rails and accessories in the UK the key to our success is simple; Home of Ultra offers the latest designs at affordable prices without compromising on quality..

As the manufacturer Home of Ultra provides a distinct advantage, the ability to offer co-ordinating taps, showers, heated towel rails and accessories. Co-ordination is paramount to the popularity of Home of Ultra by ensuring the perfect finishing touch to any bathroom and kitchen.

The growth over the last 25 years has seen the Company expand from a small operation in a former air raid shelter to premises boasting a state of the art distribution centre employing over 130 people.

Exceptional quality is one of the key factors contributing to Home of Ultra's success. We offer a 10-year guarantee, unless otherwise stated, against manufacturing defects on all products when used in normal domestic applications (excluding serviceable parts, neglect or abuse). Additionally, we guarantee the surface finishing for ten years on Chrome, unless otherwise stated.

Over two decades of manufacturing experience has provided Home of Ultra with extensive market knowledge and...

...the ability to offer the most popular styles at affordable prices.

## How to order

Consumers can order via our national network of retailers.

For Home of Ultra retail outlets and stockists telephone our sales hotline on: 01282 418000 or see our website.

### How to contact us:

For technical support and spares requests we have the following telephone helpline:  
01282 446789 Fax: 01282 418026

### Other contact details are as follows:

Sales: 01282 418000 Fax: 01282 428915  
Email: sales@ultra-group.co.uk  
www.homeofultra.com

Switchboard (all other inquiries): 01282 436934

See our Ecco collection on pages 48-51

Appropriate products have been extensively tested by the WRc and are approved by pending approval to comply with the Water Regulations Advisory Scheme.

The Government recommend the use of thermostatic mixing valves (TMVs) for bath taps and showers in all housing. TMV2 Certified Valves maintain the pre-set temperatures even if the water pressure varies when other appliances are used, preventing domestic hot water scalding.

TMV3 valves are engineered to a high standard so that they meet Government Health and Safety requirements for use in public places such as Schools, Hospitals, Offices etc. and would significantly reduce the risk of scalds occurring in the home or indeed anywhere that hot water is delivered through mixing valves.

# Introducing 'Eco-Flo' water saving flow regulators

**eco-flo**  
WATER SAVING PRODUCTS

**Flow Regulator**  
*suitable for use with basin pillar taps*  
FR201 £2.55 (pair)

**Flow Regulator**  
*suitable for use with traditional style mono basin fittings*  
FR203 £3.70 (each)

**Shower Flow Regulator**  
*suitable for use with any shower hose option*  
FR304 £4.75 (each)

**Flow Regulator**  
*suitable for use with mono basin fittings*  
FR005 £6.85 (pair)

In line with some of today's key environmental issues, we are now pleased to offer a range of water saving devices that can be retro fitted into most of our brassware fittings.

By installing our Eco-Flo water regulators to your fittings, you restrict the maximum flow rate to 6 litres per minute - in line with current environmental guidelines.

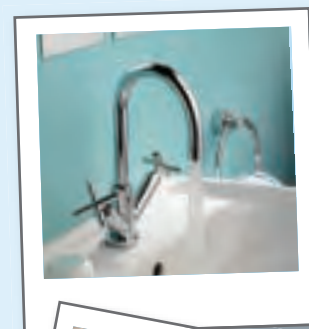

Not only will this help the environment, but it will also reduce your own water consumption and reduce running costs.

## 'Eco-Click'

The specially designed 'Eco Click' cartridge allows you to select reduced or full flow from the fitting. Click to the first setting for 50% flow rate, or click again to achieve full flow.

**Helix Single Lever Eco Click Mono Basin Mixer**  
PK309 £128.00

# shower pumps

### Do I need a pump?

Historically, British water systems are generally connected to a cold water storage tank which is kept in the loft. These are known as gravity fed systems which are low pressure, and rely on the height of the tank to provide the water flow pressure for the house. Due to height restrictions imposed on where the tank can go, low pressure is a resulting factor (can be as low as 0.1 bar). For those who prefer power shower performance, it is necessary to pump a gravity fed system, or install a high pressure boiler or unvented system.

NOTE: Only low pressure gravity fed systems can be pumped, check with your installer that the cold water storage tank and hot water cylinder is big enough (the hot water may run out). The standard UK domestic tank is 225 litres, (this should be sufficient) but for larger homes a 450 litre tank is recommended. An 120 litre cylinder for hot water should be sufficient, but a larger home may require an 166 litre cylinder. Pumps must be fitted in accordance with current Water Regulations, and not be connected to the water mains, either directly or indirectly via a mains fed water heater.

### Where will the pump be fitted?

The pumps work by pushing water rather than pulling it, and are situated as close to the water supply as possible. Therefore, they are commonly fitted close to the hot water cylinder in the airing cupboard.

### Pump specification:

Our pumps are all "Twin Impeller Pumps" which are designed to boost the performance of two water supplies (hot and cold) to a fitting with separate flow controls. Whole house applications, one or two complete bathroom suites or a single mixer valve can have their performance boosted depending on the rating of the pump chosen. Note: Avoid pumping water to traditional WC systems with lever flush operation, as this can reduce the lifespan of the pump. The disadvantages of pumped systems are that there is an element of noise during operation, and also servicing issues need to be considered. However, for many homes that require power showering from a gravity fed system, they are the only solution without having to replace the full hot water system.

### How do I choose the correct pump?

It is important that the correct pump is chosen to achieve the desired performance.

Below is a table that can be used to identify what pump would be required to satisfy your installation.

APPLICATION:	PUMP TYPE NEEDED		
	PR50D 1.5 bar	BP65D 2 bar	BP100D 3 bar
Basic bathroom suite (basin/bath taps shower mixer taps)	•	•	•
2 basic bathroom suites		•	•
Shower mixer valve - single spray pattern	•	•	
Single shower mixer valve, up to 3 spray patterns	•	•	
Single shower mixer valve, multi-function (4 spray patterns)		•	•
Shower panel			•

PR50D and BP65D are booster pumps. If you wish for true continental power shower performance, we recommend the BP100D.

# how to choose the correct shower

## Your home installation system:

When you are deciding what style of shower you require, you need to determine the type of water heating system you have installed in your home. This will affect your choice of shower and the shower's performance. To identify the type of system you have installed, there is a guide outlined below. You could also ask a qualified installer or call our customer service department on 01282 446789. This will ensure you pick the correct shower and enjoy your showering experience to its full potential.

### Low pressure systems:

#### Gravity fed hot water systems:

The usual configuration consists of a cold water storage tank in the loft and a hot water cylinder in the airing cupboard. This is the water supply traditionally installed in UK homes.

#### High pressure systems:

Instantaneous gas water heater or combi boiler: Combination boilers are increasingly used in the UK, and a wall mounted or floor standing boiler heats the water as it is used.

#### Unvented systems:

Hot water is stored in a large cylinder under pressure. This system has no requirement for a cold water storage tank.

## Different shower types:

### Mixer:

Hot and cold water are combined in a single mixer unit, are ideal for homes with a plentiful supply of hot water, and are able to provide a higher flow rate than electric showers.

Compatible systems: Gravity fed, instantaneous gas water heater or combi boiler, and unvented.

### Electric:

Cold water is supplied directly from the mains supply, and is heated by passing over a heating element in the shower. This means it is unaffected by other household water fittings and is economical.

Compatible systems: Gravity fed, instantaneous gas water heater or combi boiler, and unvented. These are supplied directly by cold mains feed.

### Pumped electric shower:

These are needed where cold mains pressure is insufficient. An integral pump draws water from a cold water storage tank and boosts water through the electric heating element to provide an economic shower.

Compatible systems: Gravity fed cold supply.

### Shower panel:

Hot and cold water is combined in a single mixer unit which requires a pumped or pressurised system.

Compatible systems: Gravity fed hot (must be pumped and give a minimum of 2 bar pressure), instantaneous gas water heater or combi boiler and unvented. (Note: Combi boilers or pumps must give a minimum of 2 bar performance.)
